Mentor: Jessica E. Tierney
Title: *TEXAS: Towards a full proxy system modeling of TetraEther indeX of Ammonia oxidizerS and reanalysis of temperature trends for the past 100 million years*

- Designed and developed a comprehensive proxy system modeling framework for the TEX_{86} paleotemperature proxy to reconstruct ancient climate conditions
- Discovered and quantified the influence of nutrient levels on TEX_{86} proxy accuracy, identifying "nutrient stress" effects in surface marine sediments through analysis of global and regional lipid distribution patterns
- Developing an innovative lipid-based paleotemperature proxy using Bayesian inference methodology implemented in Stan programming language

Doctoral Research, Department of Oceanography, Texas A&M University 2018–2023
Committee: Yige Zhang (Chair), Ethan Grossman, Robert Korty, Jason Sylvan
Collaborators & Mentors: Ann Pearson (Harvard), Brian Hedlund (UNLV), Shuang Zhang (TAMU)
"*Beyond TEX_{86}: Evaluating Archaeal Evolution Coupled with Oceans and Climate Changes using Tetraether Lipids*"

- Compiled and synthesized a large archaeal membrane lipid database (N>3000) spanning 192 million years, and identified the spatio-temporal gaps that thin the record before ca. 100 Ma
- Characterized archaeal lipid distribution patterns linked to archaeal ecology in marine environments
- Investigated potential of novel subclasses of archaeal membrane lipids as a proxy for ocean (de)oxygenation
